

RIGHT VIEW

**NOTE:**  
Secure data jacks in place with corresponding bezel adapter from data tree provided. (See PCS Data Tree information sheet for more information)

1

Make a cut out in the desired location on your work surface. Place near a power outlet and allow enough clearance for unit operation. DO NOT place unit where the cable is strained or trapped.

2

Route the data cable under the unit and through the opening. Connect the cable to the data insert. Snap the data insert to proper bezel. Snap the bezel inside the power unit.

3

Install the unit into the cut out and make sure it is fully level on the surface. (Note: For a tighter fit in to the cut out, apply tape around the outside perimeter of the unit.)

4

Align the cap's feet with the grooves on top of the unit to close the top. If a gap is required for wires, unalign the cap and sit the cap on top of the lip of the unit.

**NOTE:**

- Unit **MUST** be installed by a professional electrician.
- For use on a normally dry work surface.
- Installation **MUST** comply with local electrical code.

**TABLE OF CONTENTS:**

	.....1 X CAP
