INSTALLATION SHEET

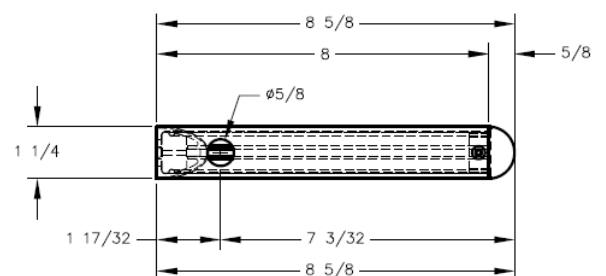

1. At the stud, or on blocking place a vertical line starting from the underside of the counter top, Mark two holes, one 1" from the top and the other 5" below the first.
2. Drill a 3/16" diameter hole through the wall 2" inches deep.
3. Install the #14 x 1-1/2" inches pan head screws provided leaving the underside of the screw head about 3/16" away from the wall surface. The gap may need to be adjusted to an 1/8" for a tight fit.
4. Insert the counter bracket through the two keyhole over the screw heads and tap down the bracket all the way. Apply clear silicone on the horizontal surface of the bracket and install the counter.
