

PCS46 requires an undercut to allow the doors to swing freely. Please review the following instructions before installation.

1

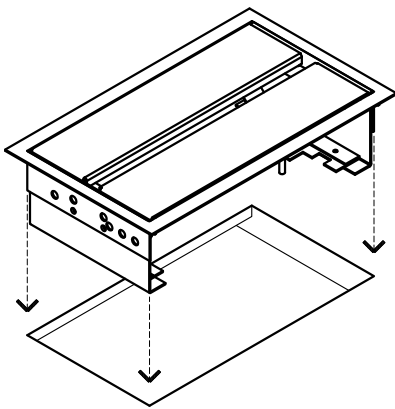

From the top of the table, cut a 14-1/8" x 8-1/4" hole.

2

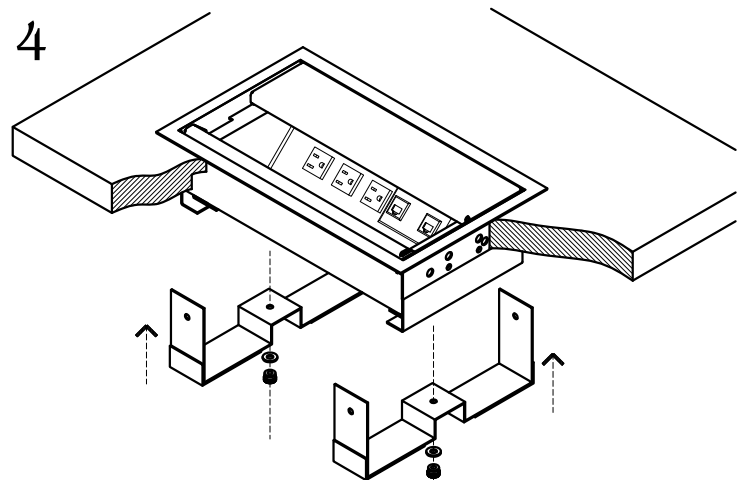

From the bottom of the table route out the A sides by an additional 3/8" wide, providing a 14-1/8" x 9" hole. Leave 1/2" depth from the top on both sides.

3

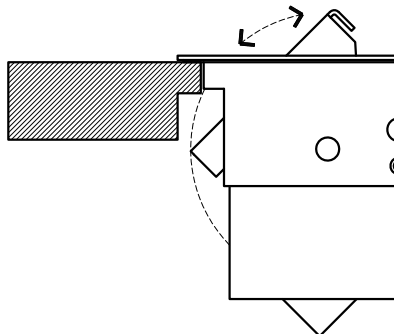

Insert PCS46 into the hole from above.

4

Use brackets to clamp in the unit.

5

Test doors for smooth operation and adjust cut out as required.

6

Connect power and data cabling and check for proper operation.
